

# Engaging Tomorrow's Scientists

---

Why STEM is Good for You and the World

Julia Scott  
Ann McQuiston

# Engaging Tomorrow's Scientists

- Who we are
- What is **STEM** engagement?
- Why is **STEM** engagement important?
- How can we, working in Healthcare Science, increase **STEM** engagement?
- Short group activity

# What is STEM?

**S**cience

**T**echnology

**E**ngineering

**M**aths

# Why does STEM matter?

- Not enough young people pursuing **STEM** careers
  - **STEM** industries crucial for **economic growth**
  - Population scientific literacy has social and economic advantages
- Profile of those in **STEM** careers too narrow
  - Several **minorities under-represented**
  - Social injustice

## In the U.S.A...

---

- **STEM** related **jobs grew** at three times the rate of **non-STEM** jobs between **2000** and **2018**
- In **2018** it is estimated that **2.4 million** **STEM** jobs went **unfilled** (Smithsonian Institute)

## In the UK...

---

- **£990m** spent on, or committed to, key **STEM-specific** interventions between 2007 and autumn 2017
- **442,000** undergraduate enrolments in **STEM** subjects in 2015/16
- **24%** of graduates in **STEM** subjects known to be working in a **STEM** occupation 6 months later (National Audit Office)

# The NHS in Scotland

---

- NHS GG&C Employability Leads require **20%** of this years **School Leavers** to ultimately work for the healthboard
- Modern apprenticeship
- HND/HNC
- Degree

# What is STEM engagement?

Medical  
Devices  
UK

Medical  
Devices  
UK

Developing next generation medical devices for the NHS

Medical Devices

**NHS**

# Why is STEM engagement good for me?

- **Continuous Professional Development**
- Showcase your interesting, 'cool' job
- Contribute to creating a young, evolving and diverse workforce for the **NHS**
- Fulfilling and fun

**STEM**  
LEARNING

Why is **STEM**  
engagement  
needed?

# Why is there a STEM gap?

- Most **young people** have high aspirations – just not for science
- Negative views of school science and scientists are **NOT** the problem
- Family **‘science capital’** is key
- Most students and families are not aware of where science can lead
- The brainy image of scientist and science careers puts many young people off
- The (white) male, middle-class image of science careers remains a problem

# Science Capital

- Louise Archer of Kings College London
- Surveyed 3658 secondary school students age 11-15 in England [1]
- Found:
  - 5% of pupils had **'high'** science capital
  - 27% of pupils had **'low'** science capital
- Level of science capital:
  - clearly patterned by **gender**, **ethnicity** and science class set
  - heavily influences post-16 plans with regard to science
  - differs dramatically in whether they feel others see them as a **'science person'**

1. *'Science Capital': A conceptual, methodological, and empirical argument for extending bourdieusian notions of capital beyond the arts.* Journal of Research in Science Teaching, Vol.52, No.7, pp 922-948 (2015)
2. TED<sup>x</sup> Talk – 'Should we stop trying to make science more fun?'  
<https://www.youtube.com/watch?v=g8D3fr-0aJ0>

Your science  
capital holdall

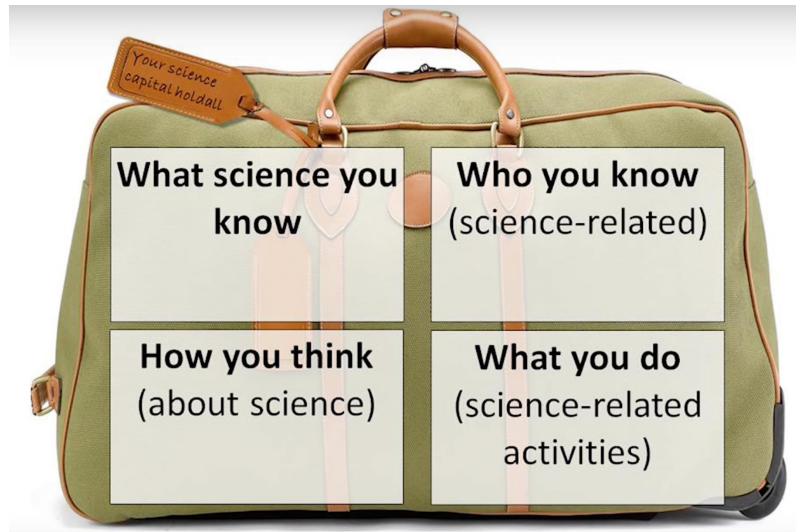

**What science you  
know**

**Who you know  
(science-related)**

**How you think  
(about science)**

**What you do  
(science-related  
activities)**

# What was your science capital?

- In S2 (Year 9)?
- In S4 (Year 11)?

# Solutions?

- Shift policy aims from ‘increasing interest’ to ‘**building science capital**’
- Earlier intervention – from primary school
- Break the ‘science = scientist’ link
- Embed **STEM** careers **awareness** in science lessons
- Tackle multiple inequalities
- Bust the ‘brainy’ image of science/science careers
- **Broaden** post-16 science options
- Build science capital with students and families

# Practical Activity

- Split into small groups
- Try and pair with people from different areas of healthcare science

5 minutes to brainstorm:

- Answers to 3 questions
- Based a real STEM ambassador request

After 5 minutes:

- Find group which has brainstormed the same activity
- Discuss your answers (similarities/differences/omissions)

# How would you measure success?

- List **3 things** you learnt from your workshop?
  - Heart facts, gravity and nanotechnology
  - I've learned what to do if someone has fainted, how to do CPR and about DNA
- List some ways you might use this knowledge in **future**?
  - I want to be either a doctor, nurse, **scientist** or an astronaut
  - University and college and high school to get a job with maths and engineering and science
- List any further things you would like to **learn** about after attending the workshop?
  - **How I can become a scientist**
  - What bacteria can kill you, what level of blood pressure could be a deadly level or is a dangerous level

# STEM in The Gorbals

- Population **8,500** (approx.)
- Male life expectancy below Glasgow average
- **53%** Single Parent Households
- **30%** income deprivation
- **27%** employment deprivation

HAVE A  
HEALTHY HEART

HEART AND THE SKIN

The Heart

- Arteries
- Plasma
- Artery
- Coronary Artery
- Left Atrium
- Left Ventricle
- Right Atrium
- Right Ventricle
- Superior Vena Cava
- Inferior Vena Cava
- Septum
- Tricuspid Valve
- Mitral Valve
- Aortic Valve
- Pulmonary Valve

Healthy Meal

Healthy Diet Pyramid

HEALTHY DIET

HEALTHY DIET

**DNA**  
DNA is the code of life.  
It is made of two strands joined together.  
It is found in every cell.  
DNA is also in the nucleus.  
It tells the cell what to do.

**OUR IMPORTANT HEFTY**  
HEFTY is a word that means heavy.  
It is used to describe something that is difficult to lift or carry.  
It is also used to describe someone who is very busy or has a lot of work to do.

For an ambulance call 999.  
Ambulance please.

**NANOMATE**  
Nanotechnology is the study of things that are very small.  
It is used to make things that are better and stronger.

**NUTRITION**  
Nutrition is the study of how food affects our health.  
It is important to eat a healthy diet.
