

## **Patient Centredness**

Patients and service are the priority in any of our activities. Government Policy is leading a transformation of The Health and Social Care landscape. Today's trainees need to be aware of the patient focus and of that the new models of care will impact all aspects of the NHS. How is our role as part of the multi-disciplinary team perceived both by other professions and the patient.

### **When:**

Webinar 1: Wednesday 9 February 2022 (1000 – 1100)

## **Whose Responsibility is it Anyway?**

Trainees need to be aware that well-organised and delivered training is a contract between trainee, supervisor and training centre. The balance between self-direction and being directed needs to be set in the context of the stage of training. Equally, beyond the training phase and in the course of our work, we all have a responsibility to spot opportunities for improvements no matter how incremental. Trainees need to be aware of the methods and thinking of "improvement" both as a professional duty and as a personal aid to their own development.

### **When:**

Webinar 2: Wednesday 9 February 2022 (1400 – 1500)

## **Next Steps - The Experience of HSS Trainees**

At the end of 2020 we were able to sponsor a cohort of 21 Higher specialist scientist trainees to commence a variety of individual training plans. The plans run for between three and five years. What has their experience been? What inspired them to take this step? What is their destination? This session is led by our HSS trainees and we hope will offer a reflection on how training and ambition does not cease when basic registration is achieved.

### **When:**

Webinar 3: Thursday 10 February 2022 (1000 – 1100)

## **Innovation and Inspiration**

The pandemic is not over but the response to it has accelerated changes to the way we deliver training. What was the beneficial experience of a trainee still to complete, whose journey was disrupted? Equally, e-learning has matured as a viable training option: how can we co-create resources that are useful and impactful. Outreach to Schools via the STEM programme or MCR Pathways is a great opportunity for trainees to hone communication and passion: hear how it continued during the pandemic.

### **When:**

Webinar 4: Thursday 10 February 2022 (1400 – 1500)

## **Communicating Our Science**

Communication really matters! The global COVID-19 pandemic and the resulting lockdown presented us all with the need for clear messaging when ambiguity and rumour could frustrate the national response. This session is a showcase of some aspects of our trainees work as a simple poster message and in lay-terms. Being able to promote the contribution of healthcare science staff in non-technical terms is never more important.

### **When:**

Session 5: Friday 11 February 2022 (1000 – 1100)
